The G7 Research Group presents the

2022 G7 Elmau Summit Interim Compliance Report
28 June 2022 to 6 January 2023

Prepared by
Keah Sharma and Malhaar Moharir
and the G7 Research Group
7 March 2023 (updated from 22 February 2023)
www.g7.utoronto.ca • g7@utoronto.ca • @g7_rg

“We have meanwhile set up a process and there are also independent institutions monitoring which objectives of our G7 meetings we actually achieve. When it comes to these goals we have a compliance rate of about 80%, according to the University of Toronto. Germany, with its 87%, comes off pretty well. That means that next year too, under the Japanese G7 presidency, we are going to check where we stand in comparison to what we have discussed with each other now. So a lot of what we have resolved to do here together is something that we are going to have to work very hard at over the next few months. But I think that it has become apparent that we, as the G7, want to assume responsibility far beyond the prosperity in our own countries. That’s why today’s outreach meetings, that is the meetings with our guests, were also of great importance.”

Chancellor Angela Merkel, Schloss Elmau, 8 June 2015

G7 summits are a moment for people to judge whether aspirational intent is met by concrete commitments. The G7 Research Group provides a report card on the implementation of G7 and G20 commitments. It is a good moment for the public to interact with leaders and say, you took a leadership position on these issues — a year later, or three years later, what have you accomplished?

Achim Steiner, Administrator, United Nations Development Programme, in G7 Canada: The 2018 Charlevoix Summit

Background

The unremitting presence of COVID-19 has propelled countries to implement measures to prevent future pandemics and protect the health and safety of all countries. The importance of health and safety has been a pertinent topic in G7 summits, dating back to the response to the HIV/AIDS epidemic at the 1987 conference in Venice.1441 The primary objective during this summit was to prevent the spread of AIDS by “strengthening existing organizations by giving them full political support and by providing them with the necessary financial, personnel and administrative resources.” The G7 sought the help of the World Health Organization (WHO), expressing that “the World Health Organization is the best forum for drawing together international efforts on a worldwide level to combat AIDS.” Ensuing, the G7 and the WHO have worked in tandem to establish quicker and more effective responses to emerging health threats across the globe.

The COVID-19 pandemic has highlighted the consequences of not being fully prepared for a global outbreak. As of 25 September 2022, approximately 6.5 million died worldwide from the coronavirus.1442 On 27 April 2022, the WHO released a policy brief titled “Strengthening pandemic preparedness planning for respiratory pathogens.” The document outlined core elements that states are encouraged to undertake in order to be fully prepared in the event of another pandemic. These elements are to a) develop an integrated approach to respiratory pathogen pandemic preparedness planning and b) enhance national sub-national functional capacities for preparedness.1443 The policy brief also details actions that states should undertake as they initiate or update their national and sub-national pandemic preparedness planning processes.

From 1980 to 2009, the G8 concentrated its health-related decision-making on the following core issues: HIV/AIDS, multiple diseases, medicine, polio, diseases in general, malaria, the Global Fund to Fight AIDS,

---

Tuberculosis and Malaria, and research.\textsuperscript{1444} Of its 206 health commitments made from 1983 to 2006, the G8 has complied with its health governance pledge with an overall level of 53 per cent.\textsuperscript{1445} Compliance has been led by the above-average performance of the European Union at 80 per cent, Canada at 75 per cent, the United States at 73 per cent, Britain at 67 per cent and France at 53 per cent.

At the 2006 St. Petersburg Summit, G8 leaders formed a response to the threat of infectious diseases due to the emergence of highly pathogenic avian influenza, with the possibility of human transmission and the eventuality of a pandemic.\textsuperscript{1446} The summit focused on least developed countries, specifically in Africa, where there is limited access to healthcare resources, information, and a workforce trained to fight against an outbreak. The G8 leaders committed to strengthening the Global Network for Surveillance and Monitoring of Infectious Diseases as well as increasing global preparedness for the possibility of a human pandemic.

At the 2016 Ise-Shima Summit, the G7 leaders committed to taking “concrete actions for advancing global health.”\textsuperscript{1447} In response to the emerging health crises of the Ebola and Zika viruses, G7 leaders agreed to improve the prevention of, detection of and response to public health emergencies. This commitment involved recognition of the WHO playing a key role in leading and coordinating emergency health plans in the event of an outbreak.

At the 2017 Taormina Summit, G7 leaders committed to “strengthening health systems, preparedness for, and a prompt, effective and coordinated response to public health emergencies and long-term challenges.”\textsuperscript{1448}

At the 2018 Charlevoix Summit, G7 leaders committed to “supporting strong, sustainable health systems that promote access to quality and affordable healthcare for all.”\textsuperscript{1449} Further, G7 leaders recognized the role of the WHO in health emergencies, as well as the need for sustainable financing through the Contingency Fund for Emergencies and the World Bank’s Pandemic Emergency Financing Facility.

At the 2020 USA Virtual Summit, G7 leaders pledged “to protect the health and safety of everyone in our countries,” a promise that came after the coronavirus pandemic.\textsuperscript{1450} Their pledge included enhancing efforts to strengthen health systems globally as well as supporting the WHO’s global mandate to “lead on disease outbreaks and emergencies with health consequences, leaving no geographical vacuum, and encouraging all countries, international organizations, and the private sector to assist global efforts such as the Global Preparedness and Response Plan.”

At the 2021 Cornwall Summit, G7 leaders committed to take action on disease prevention by stating, “we pledge to lead the way in building a resilient, integrated and inclusive global health system prepared and equipped to prevent the causes and escalation of disease, and to detect emerging health threats quickly.”\textsuperscript{1451}

Commitment Features

At the 2022 Elmau Summit, leaders committed to “step up [their] efforts in pandemic prevention, preparedness, and response under the One Health approach.”

“Reaffirm” is understood to mean “affirm again’ whereby affirm is to assert strongly, state as fact, confirm or ratify a judgment.”

“Step up” should be interpreted “to mean progression or movement forward. It does not include past or previous performance.” Past measures should not be of central importance but can be included if further or additional attention is applied.

The term “prevent” is understood to mean “to keep from happening or existing; to hold or to keep back.” Specifically, this refers to the causes (origins) and escalation (worsening) of disease. “Disease” is understood to mean “a condition of the living animal or plant body or of one of its parts that impairs normal functioning and is typically manifested by distinguishing signs and symptoms.” In this commitment, this refers exclusively to communicable diseases. Communicable diseases include infectious diseases of pathogenic origins (i.e. SARS-CoV-2, hepatitis, HIV, tuberculosis, et cetera). More specifically, emerging infectious diseases which fall under the umbrella of communicable diseases are defined as “infections that newly appear in a population, or have existed but are [rapidly] increasing in incidence or geographic range.”

“Pandemic preparedness” is defined by the WHO as “a continuous process of planning, exercising, revising and translating into action national and sub-national pandemic preparedness and response plans.”

The “One Health approach” is an “integrated, unifying approach to balance and optimize the health of people, animals and the environment.” COVID-19 is just one example of a disease caused by viruses that have jumped from animal hosts into the human population. Hence, the One Health initiative “recognizes [that] the health of humans, domestic and wild animals, plants, and the wider environment (including ecosystems) are closely linked and interdependent,” being necessary to unite experts from multiple disciplines to deliver outcomes that better prepare states as well as international organizations to prevent, predict, detect, and respond to global health threats.

---

---

G7 Research Group
7 March 2023 (updated from 22 February 2023)
255
This commitment requires G7 members to take action concerning pandemic prevention, preparedness, surveillance and response in all three spheres of the One Health approach: 1) human health, 2) animal health, and 3) environmental health.\(^{1462}\) Strong actions include, but are not restricted to, supporting the Quadripartite One Health Alliance is a collaboration between the WHO, Food and Agriculture Organization of the United Nations (FAO), World Organization for Animal Health (WOAH) and the United Nations Environment Programme (UNEP); providing further technical, political or financial support to healthcare and pandemic workforce; monitoring the emergence of zoonotic diseases; reducing Antimicrobial resistance (AMR); developing climate-resilient health systems and incorporating health considerations when developing climate policies; reducing the unsustainable footprint healthcare systems can have; as well as improving food safety and security.\(^{1463}\)

Full compliance, or a score of +1, is awarded to G7 members that demonstrate strong national or international action in pandemic prevention, preparedness, and response under all three spheres of the One Health approach (human health, animal health and environmental health).

Partial compliance, or a score of 0, is awarded to G7 members that demonstrate strong national or international action in pandemic prevention, preparedness, and response in at least one of the three spheres of the One Health approach (human health, animal health and environmental health) or who demonstrate weak action in all three spheres. Weak actions are defined as less substantial initiatives, such as verbal reaffirmations of existing commitments, with no efforts to further improve or develop the existing commitments. Examples of weaker compliance would be reaffirming prior commitments without taking new actions, attending meetings about the topic, verbal affirmations of support for improvement within healthcare systems without any concrete plans initiated and supporting international legislation without committing to specific actions.

Non-compliance, or a score of −1, will be assigned to G7 members that fail to meet the aforementioned criteria.

**Scoring Guidelines**

<table>
<thead>
<tr>
<th>Score</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>−1</td>
<td>The G7 member has NOT taken strong action in pandemic prevention, preparedness, and response under ANY spheres of the One Health approach (human health, animal health and environmental health).</td>
</tr>
<tr>
<td>0</td>
<td>The G7 member has taken strong action in pandemic prevention, preparedness, and response in at least ONE sphere of the One Health approach (pandemic prevention, preparedness, and response), OR the G7 member has taken weak action in ALL three spheres.</td>
</tr>
<tr>
<td>+1</td>
<td>The G7 member has taken strong action in pandemic prevention, preparedness, and response under ALL spheres of the One Health approach (human health, animal health and environmental health).</td>
</tr>
</tbody>
</table>

*Compliance Director: Eisha Khan

**Canada: +1**

Canada has fully complied with its commitment to step up efforts in pandemic prevention, preparedness, and response under the One Health approach.

On 1 August 2022, Minister of Health Jean-Yves Duclos announced a total of CAD17.9 million for the distribution of HIV self-testing kits and other methods of HIV testing that will improve access for populations most affected by HIV across the country, including people living in northern, remote or isolated

---

\(^{1463}\) G7 Health Ministers’ Communiqué, G7 Germany (Berlin) 20 May 2022. Access Date: 9 October 2022. http://www.g7.utoronto.ca/healthmins/2022-0520-communique.html
The provision of self-testing kits removes the barriers that prevent people from seeking testing and treatment, hence limits the spread of HIV.

On 8 August 2022, Minister of Agriculture and Agri-Food Marie-Claude Bibeau announced an investment of up to nearly CAD3 million to three national organizations to enhance animal welfare and tracking in the country. This funding allows organizations to improve animal health by drawing on new research to update industry standards for the care and handling of animals and evaluating technology to more efficiently trace farm animals in the production system in the event of a disease outbreak.

On 26 August 2022, Minister Bibeau announced an investment of up to CAD45.3 million to enhance efforts to prevent African swine fever (ASF) from entering Canada and prepare for a potential outbreak. The funding will be critical in reducing the risk of introduction and spread of ASF in Canada. This prevents and controls the spread of foreign animal diseases into and within the country, thus solidifying the One Health Approach.

On 8 September 2022, Canada hosted a six-week international virtual symposium focused on COVID-19 emerging science to connect experts from around the world that have the skills and safety measures in place to work with the most serious and deadly human and animal diseases. With more than 1,000 registrants at the symposium, Canadian and international scientific experts from academia, government and the private sector, shared scientific knowledge about COVID-19, each contributing towards the common goal of understanding this evolving pandemic.

On 21 September 2022, Prime Minister Justin Trudeau announced a CAD1.21 billion contribution to the Global Fund to fight AIDS, tuberculosis, and malaria. This funding will help to mitigate the devastating impact of COVID-19 on efforts to combat the three diseases; save 20 million lives by 2025; and get health systems back on track to eradicate AIDS, tuberculosis and malaria by 2030.

On 29 September 2022, Parliamentary Secretary to the Minister of Agriculture and Agri-Food Francis Drouin, announced an investment of up to CAD1.4 million to support Redcliff Cypress Regional Waste Management Authority and CAD10 million to support PurEnergy Inc.’s waste emissions reduction initiatives. These investments will aid these facilities in reducing carbon dioxide and methane emissions by diverting organic waste from a landfill with the help of a compost treatment facility. Furthermore, the funds will construct a...
waste diversion facility to divert organic waste from a landfill and process it using anaerobic digestion to produce biogas and fertilizer.\textsuperscript{1470}

On 7 October 2022, Health Canada authorized a second bivalent COVID-19 vaccine booster.\textsuperscript{1471} This is an updated version of the Pfizer-BioNTech Comirnaty COVID-19 vaccine, targeting the Omicron BA.4 and BA.5 subvariants and is authorized for use as a booster dose in individuals 12 years of age and older. Vaccination is effective at preventing severe illness, hospitalization and death from COVID-19.

On 14 October 2022, Minister of International Development Harjit S. Sajjan announced an investment of over CAD11.1 million through the Regional Innovation Ecosystem program for two projects at the University of British Columbia, which will focus on advancing the delivery and efficacy of mRNA vaccine technology.\textsuperscript{1472}

On 21 October 2022, Minister of Labour Seamus O'Regan Jr announced an investment of up to CAD37,000 from the Low Carbon Economy Fund to support Sea-Force Hyperbaric Inc. with a fuel-switching project to reduce emissions by replacing three oil furnaces with air-to-water heat pumps at the Sea-Force Hyperbaric Inc. Reception Facility.\textsuperscript{1473}

On 16 November 2022, Agriculture and Agri-Food Canada launched the ASF prevention and preparedness program which allows eligible organizations to apply for funding under the Government of Canada’s African Swine Fever Industry Preparedness Program (ASFIPP).\textsuperscript{1474} The program was put in place to aid Canada’s pork industry prepare for the possible transmission of African swine fever within the country.

On 6 December 2022, Minister of Environment and Climate Change Steven Guilbeault alongside Minister of Environment and Climate Change Strategy for the Province of British Columbia, announced an investment of up to CAD600,000 from the Low Carbon Economy Fund to help the Kwadacha and Heiltsuk Nations create organic waste within the communities, reusing organic waste to produce biogas and fertilizer.

Canada has fully complied with their commitment to step up their pandemic preparedness and response under the One Health Approach. Canada has greatly invested in the research and development of the SARS-CoV-2 virus, funded the health systems to limit the spread of transmittable diseases, improved animal health and improved the access of self-testing services across the country.

Thus, Canada receives a score of +1.

Analyst: Czarina Leung

France: 0

France has partially complied with its commitment to step up efforts in pandemic prevention, preparedness, and response under the One Health approach.

On 31 July 2022, Minister of Higher Education and Research Sylvie Retailleau and Minister of Health and Prevention François Braun, created a Health Risk Monitoring and Anticipation Committee (COVARS). COVARS is a committee of scientists, doctors and professors using their collective knowledge to work together in order to prepare for, anticipate and respond to pandemics and other global health and security threats. COVARS’ mandate conforms with the One Health approach as the committee is working to promote health and disease prevention in humans as well as animals and the environment.

On 29 August 2022, Minister of State for Development Francophonie and International Partnerships Chrysoula Zacharopoulou met with health civil society organizations and the Ambassador of World Health, Stephanie Sedoux and asserted France’s belief that health is a global public good. Minister Zacharopoulou highlighted France’s commitment to continuing to strengthen healthcare systems globally.

On 3 October 2022, France introduced the fall vaccination campaign which offers bivalent mRNA COVID-19 boosters for vulnerable populations in France. This effort demonstrates France’s commitment to stopping the spread of the COVID-19 pandemic domestically by protecting those most at risk through vaccination.

On 16 October 2022, Minister Braun attended the three-day World Health Summit in Berlin and asserted France’s support for the amendment of the International Health Regulations to better respond to future pandemics and allow for the creation of a new international agreement on pandemics. These initiatives will bolster internationally unified pandemic preparedness and response strategies.

On 18 October 2022, Christophe Béchu, Minister for Ecological Transition and Territorial Cohesion, expressed support for the combined “call for projects” of two French research platforms, the Green Data for Health

---

platform, and the Health Data Hub.\textsuperscript{1481} Under the auspices of the Ministry for Ecological Transition and Territorial Cohesion, these two platforms are calling for projects that will make environmental health data easier to find and more complete, ultimately enabling more fulsome research in the study of environmental health. Researching the intersection between health and the environment is critical to protecting and promoting global health under the One Health approach.

On 27 December 2022, the Ministry of Health and Prevention reaffirmed their commitment to strengthening global health systems under the One Health Approach, emphasizing “the interdependence between human health, animal health and that of ecosystems” in an update on the Ministry of Health and Prevention website for World Pandemic Preparedness Day.\textsuperscript{1482} France highlighted their continued commitment to global health partnerships, including the Preventing Zoonotic Disease Emergence Initiative and the World Health Organization’s Pandemic Fund, European health partnerships, including the European Commission’s Health Emergency Preparedness and Response Authority, and domestic health security and pandemic preparedness.

France has partially complied with their commitment to step up their pandemic preparedness and response under the One Health approach. France has reiterated the importance of strengthening global healthcare systems in order to fight the COVID-19 pandemic as well as to prepare for future pandemics. Moreover, they have demonstrated their commitment to research in the areas of global health security threats and environmental health. However, since the Elmau Summit, France has not made any new financial commitments to step up its pandemic preparedness and response internationally. Moreover, it has not donated any Personal Protective Equipment or vaccines to developing countries that continue to fight the COVID-19 pandemic.

Thus, France receives a score of 0.

\textit{Analyst: Tegan Hore-Kelman}

**Germany: +1**

Germany has fully complied with its commitment to step up efforts in pandemic prevention, preparedness, and response under the One Health approach.

On 8 July 2022, the German government passed an amendment to its energy policy which affected five laws.\textsuperscript{1483} The Renewable Energy Act, Offshore Wind Act, Onshore Wind Act, Energy Industry Act and Federal Nature Conservation Act were made to increase their individual capacities and efficiency. The Offshore Wind Act increased its tender volumes which speeds up the construction of offshore wind farms and the Federal Nature Conservation Act which simplified its verification measures to allow for the more rapid implementation of “wind energy projects.” These measures will ensure that Germany expands its use of renewable energies.

On 18 July 2022, at the 13th annual Petersberg Climate Dialogue, Chancellor Olaf Scholz affirmed the significance of international climate protection and pledged to reduce German carbon dioxide emissions and become one of the first climate-neutral industrial countries by 2045.\textsuperscript{1484}

\textsuperscript{1483} Germany remains committed to its existing climate and power sector decarbonisation targets, Energiepartnerschaft (Beijing) 8 July 2022. Access Date: 25 December 2022. https://www.energypartnership.cn/home/current-changes-in-germanys-energy-and-climate-policy/

On 8 September 2022, the Development Minister Svenja Schulze announced that Germany will contribute EUR1.3 billion between 2023 and 2025 to the Global Fund to Fight AIDS, Tuberculosis and Malaria. The funding was allocated towards “ending AIDS, TB and malaria as public health threats by 2030.” In addition, funding will be used to build more resilient healthcare systems to handle future pandemics.

On 12 October 2022, Germany’s cabinet approved agreed to adopt the Act on Animal Husbandry Labelling. This bill would eventually force all food producers to disclose information on the treatment of animals used. Germany is the first country in the EU with mandatory labels, ranging from free-range, to organic production.

On 18 October 2022, Minister Schulze stated that Germany will contribute EUR3.5 million to the Global Polio Eradication Initiative. The initiative aims to eradicate polio through vaccinating “370 million children annually over the next five years and continue disease surveillance across 50 countries.” In addition to the aforementioned effects of their contributions, Germany predicts that national healthcare systems will strengthen and this will lead to “healthier societies.”

Germany has fully complied with its commitment to step up efforts in pandemic prevention, preparedness, and response under the One Health approach. Germany has taken actions to further the health of the environment, animals and humans. Thus, Germany receives a score of +1.

Analyst: Roya Aboosaidi

Italy: 0

Italy has partially complied with its commitment to step up efforts in pandemic prevention, preparedness, and response under the One Health approach.

On 7 July 2022, the Italian National Institute for Health, Migration, and Poverty in collaboration with the World Health Organization Center on Health and Migration Evidence and Capacity Building launched an online tool to support countries in reducing health inequities. The repository of health equity public health interventions is a free and accessible catalog of public health interventions evaluated by a group of independent experts to aid in reducing future health inequities and to better inform decision-making in relation to community health.

On 11 July 2022, the government of Italy approved the statute of the Foundation “Fondazione Biotecnopolo di Siena.” The Foundation is a non-profit, private legal entity, whose founding members include the Ministry of University and Research, the Ministry of Health, the Ministry of Economy and Finance, and the Ministry of Economic Development. The Foundation performs the function of “National Pandemic Hub” through the “Centro nazionale anti pandemico-CNAP” (National Pandemic Center), which will contribute to the research, development and production of vaccines and monoclonal antibodies and will interact with centers involved in

---

the development of vaccines according to the One Health model. The CNAP will be financed with up to EUR340 million until 2026 through the National Recovery and Resilience Plan.\textsuperscript{1489}

On 8 August 2022, Italy began a vaccination campaign against monkeypox for “gay, bisexual men and transgender people who have recently had sex with multiple partners, recently had a sexually transmitted infection or use chemical drugs when having sex” in addition to healthcare workers that work in contact with monkeypox cases.\textsuperscript{1490}

On 7 November 2022, at the 27th Conference of the Parties (COP27) to the United Nations Framework Convention on Climate Change in Egypt, Prime Minister Giorgia Meloni assured that despite complex international conditions, Italy remains in full compliance with the goals of the 2015 Paris Agreement to keep global temperatures from rising by over 1.5°C. Additionally, Prime Minister Meloni discussed that Italy will be pursuing an energy diversification strategy and has been reducing reliance on Russian gas.\textsuperscript{1491}

On 7 November 2022, at COP27, Prime Minister Meloni announced that Italy has almost tripled their financial commitment to climate finance to USD1.4 billion for the next five years, including EUR840 million in the new “Italian Climate Fund.” This investment is dedicated towards creating and deploying clean technology to assist in climate change in developing countries.\textsuperscript{1492}

On 5 December 2022, Prime Minister Meloni gave a speech at the “Italy of Regions” event promoting personalizing healthcare services to the needs of local areas. She also specified an increase in the National Health Fund to tackle the COVID-19 pandemic. This would allow each region to be able to enact reforms and create infrastructure to improve the quality of healthcare given.\textsuperscript{1493}

Italy has partially complied with its commitment to step up their pandemic preparedness and response under the One Health Approach. Italy has demonstrated its commitment to increasing public health measures to make the healthcare system more accessible and personalized based on need, as well as supporting the health of marginalized groups. Additionally, Italy has worked towards improving environmental health and slowing the growth of climate change. However, Italy has not illustrated its commitment to pandemic prevention in the future, and has yet to make any financial investments towards the future and global health.

Thus, Italy receives a score of 0.

\textit{Analyst: Maya Javier}

**Japan: 0**

Japan has partially complied with its commitment to step up efforts in pandemic prevention, preparedness, and response under the One Health approach.

On 3 October 2022, the government announced that it will invest JPY226.5 billion into 17 projects led by companies and universities to support the manufacturing of vaccines for future pandemics. This investment illustrates Japan’s commitment to future pandemic prevention.\textsuperscript{1494}

On 22 November 2022, the Ministry of Health granted fast-track approval to Shionogi & Co. for its COVID-19 tablet Xocova, Japan’s first domestically produced oral medicine against COVID-19. This medication will help reduce coronavirus in the body, aiding in slowing down the COVID-19 pandemic.\textsuperscript{1495}

Japan has partially complied with its commitment to step up its pandemic preparedness and response under the One Health Approach. Japan has demonstrated its commitment to preventing future pandemics and fighting the current COVID-19 pandemic. However, since the Elmau Summit, Japan has not illustrated its commitment under the One Health approach such as that of disease monitoring or prevention, animal health, or environmental health and climate change.

Thus, Japan receives a score of 0.

\textit{Analyst: Maya Javier}

**United Kingdom: +1**

The United Kingdom has fully complied with its commitment to step up efforts in pandemic prevention, preparedness, and response under the One Health approach.

On 30 June 2022, the Secretary of State for Health and Social Care Sajid Javid and the United Kingdom government’s Global Antimicrobial Resistance Innovation Fund invested GBP4.5 million in the Global Antibiotic Research and Development Partnership.\textsuperscript{1496} This investment brings the United Kingdom’s total investment in the Global Antibiotic Research and Development Partnership to GBP19 million. The Global Antibiotic Research and Development Partnership is working to find treatments to drug resistant infections, a global health security issue that killed as many as 1.3 million people in 2019. The United Kingdom’s investment in research and development of antimicrobial resistant infections is critical to the global effort to prepare for future pandemics and respond to ongoing infectious disease outbreaks.

On 20 July 2022, the United Kingdom, in partnership with the United States, launched a challenge for innovators to develop privacy enhancing technologies that can “forecast an individual’s risk of infection” to disease, ultimately allowing faster pandemic detection and response globally.\textsuperscript{1497} Successful innovators will be offered compensation from a prize pool, incentivizing participation of innovators in this pandemic preparedness initiative.

On 12 August 2022, a letter correspondence from a Parliamentary Under Secretary of State for Vaccines and Public Health, Maggie Throup, to Chief Executive at the United Kingdom Health Security Agency, Professor

Jenny Harries, outlined the 2022-2023 United Kingdom Health and Security Agency’s priorities.\textsuperscript{1498} One of these priorities was to prepare for future pandemics through the creation of a Centre for Pandemic Preparedness. The United Kingdom Health Security Agency’s Centre for Pandemic Preparedness will use advanced technology such as genomic surveillance to “prevent, detect, track and respond to public health threats rapidly.” The Centre for Pandemic Preparedness will also work alongside the United Kingdom’s Department of Health and Social Care with developing pandemic preparedness policies and enforcing pre-existing policies.

On 21 September 2022, Minister of State for Development Vicky Ford gave a statement at the United Nations General Assembly that the United Kingdom will continue to work with the Global Fund to prepare for and respond to pandemics and improve healthcare systems worldwide.\textsuperscript{1499} The Global Fund has played an instrumental role in strengthening healthcare systems globally and stopping the spread of the COVID-19 pandemic.

On 25 September 2022, the British Embassy in Honduras donated 123,000 Personal Protective Equipment (PPE) to Honduras.\textsuperscript{1500} This PPE donation consists of 48,600 Type IIR Masks, 7,800 Gowns, 3,600 Visors and 63,000 Aprons. This contribution aims to aid Honduras in its response to the COVID-19 Pandemic by enabling healthcare workers to safely treat COVID-19 cases.

On 17 October 2022, the Chief Veterinary offices in England, Wales and Scotland announced an “Avian Influenza Prevention Zone (AIPZ), designed to stop the Avian flu outbreak in Great Britain’s captive bird and poultry populations.”\textsuperscript{1501} The AIPZ will enforce strict biosecurity rules that bird owners must follow in order to improve the sanitation and hygiene of their poultry or captive birds. These measures are critical to protecting the health of birds in the United Kingdom, and demonstrate the United Kingdom’s commitment to promoting animal health as outlined under the One Health approach.

On 24 October 2022, the United Kingdom Covid Commemoration Commission opened itself up to suggestions from the public on how to best commemorate the COVID-19 pandemic and pay tribute to lives lost.\textsuperscript{1502} The Commission’s work will help future generations understand the COVID-19 pandemic and the important developments in public health and safety that it necessitated. This knowledge will encourage future generations to prepare for pandemics and aid them in this preparation by informing them of the health and safety measures taken to combat COVID-19. Opening up the process of commemorating COVID-19 to the public will ensure an accurate depiction of the effects of COVID-19 on various groups in the United Kingdom.

On 23 November 2022, Minister of Health Steve Barclay and South Africa’s Minister of Health Joe Phaahla signed a health partnership between the United Kingdom and South Africa.\textsuperscript{1503} They announced nine new combined research projects aimed at developing health systems and protecting these systems from the threats presented by climate change. Under this partnership, the United Kingdom aims to strengthen global health

systems by providing 18 African countries with increased funding for pandemic preparedness and increasing vaccine manufacturing in South Africa.

On 19 December 2022, Oliver Dowden, the Chancellor of the Duchy of Lancaster, and the Cabinet Office announced the publishing of the United Kingdom’s new “Resilience Framework.”

Incorporating all levels of government, and both the public and private sectors, the “Resilience Framework” aims to build an emergency plan that will allow the country to effectively prepare for, and respond to “risks and hazards- such as extreme weather, terrorism and pandemics.” The multisectoral and collaborative approach to risk management promoted by the “Resilience Framework” aligns with the One Health Approach, preparing the United Kingdom, and the world for future health security threats.

The United Kingdom has fully complied with its commitment to step up their pandemic preparedness and response under the One Health Approach. It has consistently provided aid to countries fighting the COVID-19 pandemic, invested in research to prevent and detect the spread of infectious diseases in humans and animals and given concrete examples of how it will strengthen global pandemic preparedness.

Thus, the United Kingdom receives a score of +1.

**Analyst: Tegan Hore-Kelman**

**United States: 0**

The United States has partially complied with its commitment to step up efforts in pandemic prevention, preparedness, and response under the One Health approach.

On 22 August 2022, the National Institutes of Health contributed USD34 million as part of a five-year plan to fund “six independent Centers for HIV Structural Biology.” The funding was allocated towards HIV research and preventative strategies to aid in the ongoing HIV/AIDS public health concern. The research aims to find the different make-ups of HIV and analyze how they may be manifested differently into the body in order to develop “HIV therapies and preventative vaccines.”

On 20 September 2022, the American Rescue Plan contributed USD90 million to “support current and future genomic surveillance.” This funding will be particularly used for supporting the Pathogen Genomics Centers of Excellence network over five years. This network will work to “improve innovation and technical capacity in pathogen genomics, molecular epidemiology, and bioinformatics to better prevent, control, and respond to microbial threats of public health importance.”

On 29 September 2022, the United States Department of Education sent a letter to district recipients of the Coronavirus Aid, Relief, and Economic Security Act to continue using their funding through the rest of 2022. It gives individual schools the autonomy over implementing “effective, evidence-based strategies to operate schools safely, accelerate academic achievement, support students’ mental health needs, and

---

strengthen our educator workforce.” As the American Public Health Association mentioned, “environmental health is a key part of public health … [and] is especially important for the protection of children.”

On 18 October 2022, the Biden-Harris Administration revised the National Biodefense Strategy to entail “the 100 Day Mission goal – developing vaccines for new pandemics within 100 days.” In addition, “increasing vaccine uptake rates to over 85 percent, … developing and deploying pathogen-specific tests within 30 days; producing rapid, low-cost, … diagnostics within 90 days … and maintaining clinical trial infrastructure so that new trials can be launched within 14 days of medical countermeasure identification.” Additional goals were included to prepare the nation for future biomedical health issues.

The United States has partially complied with its commitment to step up efforts in pandemic prevention, preparedness, and response under the One Health approach. Although the US has taken action to fund the human health and environmental aspects of the One Health approach, the animal health sector has lacked new initiatives and support as of 28 June 2022. Rather, for the animal health sector, the initiatives that have been created in the past are maintained rather than innovative initiatives. This is proven through the regulation of antibiotics in animals used for food, which was not a new initiative.

Thus, the U.S. receives a score of 0.

Analyst: Reya Aboosaidi

European Union: +1

The European Union has fully complied with its commitment to step up efforts in pandemic prevention, preparedness, and response under the One Health approach.

On 29 June 2022, the European Parliament and Council extended the Regulation establishing the EU Digital COVID Certificate. The extension of the Regulation ensured that travelers could continue to use their EU digital COVID certificate for travel within the Union in member states where these certificates were required. This certificate has facilitated the free movement of travelers within the European Union during the pandemic.

On 26 July 2022, the European Commission presented a list of headline indicators for monitoring progress towards the European Union’s environment and climate goals to 2030, as well as the 2050 long-term vision to “live well, within planetary boundaries.” This fosters transparency and informs Europeans about the impact of EU climate and environmental policy, hence promoting environmental health.

---

On 24 October 2022, the European Centre for Disease Prevention and Control (ECDC) has been strengthened in the areas of surveillance, early warning, preparedness and response. An EU Health Task Force was created to assist local responses to the outbreak of diseases, the provision of expertise to EU member states and the European Commission, for instance in the development, examination and updating of preparedness plans. The ECDC will also be tasked with the development of digital platforms for epidemiological surveillance.

On 24 October 2022, Deputy Prime Minister and Minister of Health of Czechia Vlastimil Válek adopted a new EU law which facilitates the timely purchase of and access to medicines, vaccines and raw materials, activates emergency funding and enables the monitoring of production facilities when another health crisis hits. This new rule ensures that a future pandemic can be swiftly controlled.

On 26 October 2022, The European Investment Bank approved a EUR11.2 billion of new financing to accelerate business investment, clean energy and climate action, health, education and sustainable transport across Europe and around the world. This funding facilitates green investment and education, thus alleviating environmental damages.

On 30 November 2022, the European Commission published the “EU Global Health Strategy: Better Health for All in a Changing World.” In the document, the commission outlined twenty guiding principles to shape global health until 2030 and identified three priority areas, including: improving health across the life course, strengthening health systems and preventing and combating health threats (e.g. pandemics, etc.) through a One Health approach. As part of the strategy, the commission stresses the importance of humanitarian assistance and civil protection operations in emergency and crisis settings pertaining to global health.

The European Union has fully complied with their commitment to step up their pandemic preparedness and response under the One Health Approach. It has facilitated the movement of people during the pandemic, strengthened the disease monitoring systems, promoted environmental health and adopted laws to implement medical countermeasures.

Thus, The European Union receives a score of +1.
